

## Introducing Little Dentures

It's my pleasure to introduce a revolutionary breastfeeding appliance designed to alleviate the challenges faced by new mothers encountering latching difficulties. Developed with the utmost care and expertise, Little Dentures offers a seamless solution to enhance the breastfeeding experience for both mother and baby. Its innovative design incorporates intuitive features to facilitate firm latch-on. With little dentures, mothers can confidently navigate through the initial stages of breastfeeding, ensuring optimal nutrition and bonding for their little ones.

# Little Dentures

A new approach to  
solving latch issues for  
breast feeding mothers

CHOMP

## Latching Difficulties can slow milk production

A baby must be able to remove enough milk from the breast during breastfeeding to gain weight and "tell" the breasts to increase or maintain milk production. If the baby does not get enough milk, he or she will have poor weight gain. Also, the amount of milk being made for the baby will decrease. - Hopkins Medicine

## Benefits

### Of Little Dentures

- Reduced feeding time from 45 minutes to as little as 3 minutes.
- No more plugged milk ducts
- Fewer Cues to feed in a 24 hours period.
- Increases milk production by 300%

## Frequent Questions

### FAQ

Q: Won't this hurt?

A: Absolutely, it's a full mouth of teeth, but it's important to remember that no latch is perfect or without discomfort.

Q: How long does this last?

A: Little Dentures are only needed until your baby begins teething. typically the first tooth sprouts around 4-6 months.
